This document has been compiled primarily from documents created by Vineyardsoft, the developers of the Event Manager that has been used by Exact Customers for years.

It was created as a guide to build awareness for functionality with the Exact Macola Back Office software (Progression, Macola ES or Globe) and Exact Synergy (ASP and Enterprise) for Business Partners and End User Customers.

This is not a complete guide, but a document that will constantly change as new functionality and ideas on the use of the functions will require changes.

The best way to use this guide is to get your hands dirty and create Event Manager Queries and Events which utilize the functions that are being presented.

You may find the most recent copy of this guide available for download from our website at www.SynergyExpert.com

Table of Contents

Alerts Based on Inactivity..... 5

Using KnowledgeSync Event Manager for Reports on Demand 7

Controls for Formatting Alert Messages..... 8
